AI DIGITAL BUSINESS • PREMIUM EDITION

THE DIGITAL PRODUCT LAUNCH SYSTEM

A practical operating manual for turning expertise into a sellable digital product

FIELD GUIDE / WORKBOOK / IMPLEMENTATION SYSTEM

A practical system for building, validating and selling a digital product.

Executive overview

यह playbook किसी 'जल्दी अमीर बनें' योजना के बजाय एक repeatable business process देता है: सही समस्या चुनना, ग्राहक से प्रमाण जुटाना, उपयोगी asset बनाना, उसे स्पष्ट offer में पैक करना, checkout और delivery को सुरक्षित बनाना, फिर data के आधार पर सुधार करना।

Operating principle पहले demand का प्रमाण, फिर production का खर्च। Product की quality का मूल्य pages की संख्या से नहीं, ग्राहक के काम को कितना आसान बनाता है इससे तय होता है।

The operating model

Stage	Decision gate	Evidence required
01 • Discover	क्या समस्या वास्तविक है?	Customer interviews, repeated pain points
02 • Validate	क्या लोग समाधान चाहते हैं?	Sample engagement, qualified interest, paid signal
03 • Build	क्या product उपयोगी है?	Working sample, instructions, QA checklist
04 • Package	क्या offer स्पष्ट है?	Deliverables, boundaries, price, terms
05 • Launch	क्या खरीद और delivery काम करते हैं?	Successful test order, receipt, download test
06 • Improve	क्या ग्राहक value पा रहे हैं?	Feedback, usage questions, refunds, metrics

01 — Choose a marketable problem

'AI सीखना' बहुत व्यापक विषय है। 'स्थानीय दुकानदार के लिए 30 दिन का WhatsApp content planner' अधिक स्पष्ट है क्योंकि audience, task और output पहचानने योग्य हैं।

Weak idea	Sharper product angle	Why it is stronger
AI for everyone	Hindi AI prompt kit for tutors	Audience and use case are specific
Make money online	Freelancer proposal & follow-up templates	Concrete job-to-be-done

Business automation	Lead follow-up workflow for small service firms	Clear workflow and measurable use

Problem scorecard

हर criterion को 1–5 score दें; 5 सबसे मजबूत संकेत है। यह internal decision aid है, market research का substitute नहीं।

Criterion	Question	Score
Urgency	क्या समस्या अभी हल करनी है?	__/5
Frequency	क्या यह बार-बार होती है?	__/5
Reachability	क्या आप इस audience तक पहुँच सकते हैं?	__/5
Willingness signal	क्या लोग पहले से समय/पैसा खर्च करते हैं?	__/5
Product fit	क्या digital file से मदद मिल सकती है?	__/5

02 — Customer discovery that avoids guesswork

1. पहले से product pitch न करें; वर्तमान व्यवहार पूछें।
2. पिछली बार का उदाहरण माँगें—'आपने पिछली बार यह काम कैसे किया?'
3. समय, लागत, गलतियों और workaround को नोट करें।
4. एक ही उत्तर को market truth न मानें; patterns खोजें।
5. अपनी hypothesis लिखें और कौन-सा evidence उसे गलत साबित करेगा, यह भी लिखें।

Interview prompt 'अगर यह समस्या अगले महीने भी बनी रही तो क्या असर होगा?' और 'आपने इसे हल करने के लिए अब तक क्या कोशिश की?' जैसे खुले सवाल पूछें।

03 — Validate before you build

Signal	Strength	Interpretation
'अच्छा idea है'	Weak	Politeness may not mean demand

Sample download	Moderate	Interest, but not necessarily purchase intent
Specific follow-up question	Moderate	Problem relevance is plausible
Pre-order / paid pilot	Stronger	Payment intent, subject to refund and fulfilment

Validation test में एक audience, एक promise और एक CTA रखें। 7 दिन के छोटे test में reach, sample clicks, enquiries और paid commitments दर्ज करें। छोटे sample को definitive proof न समझें।

04 — Product architecture

Asset	Job it does	Quality bar
Core guide	Explains the process	Clear sequence, examples, limitations
Templates	Reduce blank-page effort	Editable, labeled, with instructions
Prompt library	Speeds up drafting	Context, task, constraints, output format
Planner	Turns advice into action	Time-boxed tasks and completion evidence
Calculator	Supports decisions	Transparent formulas and assumptions
Quick-start file	Reduces confusion	What to open first, file list, support route

05 — AI-assisted production workflow

6. Create an outline with audience, outcome, prerequisites and exclusions.
7. Draft one section at a time; require examples and an action step in each section.
8. Verify factual claims, legal/tax statements, pricing and technical steps independently.
9. Replace generic examples with original, realistic scenarios and label fictional examples.
10. Run a content QA pass: consistency, repetition, readability, source checking and missing caveats.
11. Export files, open them on mobile and desktop, test all links and formulas, then version the release.

06 — Offer design and pricing

Price is a hypothesis. It should reflect audience value, quality, alternatives, support burden, fees and taxes. The ₹999 figure is a test price—not a claim that the market will accept it.

Offer layer	Example deliverable	Purpose
Core	Hindi launch playbook	Teach the method
Implementation	Editable templates and planner	Help apply the method
Acceleration	Prompt library and examples	Reduce drafting time
Decision support	Pricing workbook	Make assumptions visible
Support boundary	FAQ and update policy	Set expectations

Unit economics

Contribution per order = collected revenue − applicable tax portion − payment fees − variable delivery/support costs − expected refund cost. Period profit then subtracts marketing spend and fixed costs. Do not mix tax-inclusive and tax-exclusive numbers.

07 — Landing page conversion architecture

Section	What to answer	Proof asset
Hero	Who is this for and what does it help them do?	Specific headline + product mockup
Problem	Why is the task difficult today?	Recognizable situations
Mechanism	How does the kit help?	Process diagram or preview
Deliverables	Exactly what files are included?	File list and sample pages
Fit	Who should / should not buy?	Clear qualification
Trust	What can the buyer verify?	Real sample, contact, policies
Offer	What is the price and what happens next?	Transparent checkout details
FAQ	Delivery, compatibility, refunds,	Direct answers

	support?

08 — Checkout and delivery control

- Use a payment provider supported for your business and region; confirm current fees and requirements directly.
- Fulfil only after verified payment confirmation from the provider—not merely a browser redirect.
- Test successful payment, failed payment, duplicate webhook, refund, wrong email and expired link scenarios.
- Send a clear receipt/confirmation and one ‘start here’ instruction.
- Collect only the customer data you need; restrict staff access and keep backups.

09 — Launch plan: first 30 days

Days	Focus	Exit criteria
1–5	Audience and interviews	Repeated problem statement
6–7	Validation	Sample test and recorded responses
8–14	Build	Draft, examples, templates
15–18	Quality assurance	Proofread, test files and formulas
19–22	Offer and checkout	Policies, test order, delivery test
23–26	Soft launch	Qualified traffic and feedback
27–30	Improve	Top issues fixed; next experiment chosen

10 — Measurement dashboard

Metric	Formula	Use
Conversion rate	Orders ÷ relevant visitors	Offer/page effectiveness
Average order value	Revenue ÷ orders	Bundle and upsell performance
Refund rate	Refunded orders ÷ paid orders	Expectation/quality check

CAC	Marketing spend ÷ acquired customers	Acquisition efficiency
Contribution/order	Revenue less variable costs	Economics before fixed costs

11 — Risk, privacy and IP controls

- Do not paste passwords, OTPs, payment details or identifiable customer records into AI tools.
- Use original text and assets or confirm license and permitted commercial use.
- Do not invent testimonials, customer counts, ratings or scarcity.
- Clearly state that the toolkit does not guarantee income or sales.
- Publish accurate privacy, refund, delivery and support terms; obtain professional review where needed.

12 — Release checklist

- [ ] Product promise is specific and realistic
- [ ] Every listed deliverable exists
- [ ] DOCX/XLSX/PDF files open correctly
- [ ] Spreadsheet formulas tested with sample inputs
- [ ] Links, spelling, page layout and mobile readability checked
- [ ] Price, taxes, delivery and refund terms shown before payment
- [ ] Support contact and version date included
- [ ] Test purchase and delivery completed

Final operating rule

A premium product is not premium because it has a gold cover or 100 prompts. It is premium when the buyer can understand what to do, use the files without guesswork, trust the claims and reach a useful outcome with less friction.
